Proto Martyr  
John dyed,  
aged 89. years

Honiwax. 1630.

*A Prognostication for this  
yeare of our Lord God,*

1630.

Being the First from the Bissextile or Leape-yeare.

Wherein (besides the generall  
state of the Foure Quarters of the  
yeare) are inserted sundry Physicall ob-  
servations with the Eclipses of the  
Luminaries, and other notes  
and directions of good  
consequence.

Probably gathered from the seue-  
rall habitudes and configurations of  
*this our Orbe*, to that of light, and  
others, and of all of them one  
to an other.

By *I: Honiwax* louer of the  
*Mathematickes.*

¶ Printed at London, for the Company  
of Stationers. 1630.

### *Physicall directions.*

That these inferiour bodies depend vpon the superiour, and those of God himselfe, no true Philosopher or sound Scholler doth doubt or demie, neither it is to be maruailed that the most sapient Architect doth gouerne these things which he hath made, by others which he hath likewise formed, and consequently worketh by the subordinate meanes; for if he should otherwise bring his degree to passe, there would be no place left for miracle. And that the Lord effecteth his will by secundarie causes (salued in miraculous infrigement) common experience teacheth: for to let passe the wonderfull effects of the Sun subiectible each simple mans capacitie, and the other planetarie Orbes of more secret influence; doth not the fluxe & reflux of the Sea, with the braine and humors both of man and beasts, and of creatures liuing in water as on dry land depend, increase and decrease, according to the Moones motion, visuall appearance and habitude to the Sun, and other fixed & moueable Orbes & which granted to be true (as of necessitie it must) how beneficiall the knowledge of Astrologie is, especially in practise of Physicke, I referre to euery mans iudgement.

And first in Phlebotomie or blood letting, although indeede a well experienced Chirurgion, without any

## A Prognostication.

great danger, may open a vaine when the Mone governeth that member wherein incision is to bee made, because he knoweth or is directed by the learned Physician, what quantitie of blood is fit to bee euacuated, and likewise when and how to stoppe the fluxe thereof at pleasure: yet notwithstanding, I wish euery one to consider, that at such a time, the best blood is impelled, and floweth more abundantly to that member, and mixeth it selfe so in time with the bad, that when the one is spent, the other spilleth: which how dangerous it is to the sicke patient. Medicorum sit iudicium.

## A discription of the Foure quarters of the yeare, and first of Winter.

**W**inter, the first quarter Astronomicall, began the 22. day of December last 1629. at which time the Sun entred into the first Scricple of the Southern and tropicall signe Capricornus, and continuing untill he haue gone to the latter degree of Pisces. This is the coldest time of the yeare, and the colder and dryer, the wholsomer, yet ouer much cold killeth trees in warme region, especially such as be tender. A warme and moyst Winter is vnwholsome, and an enemy to husbandmen, but reasonable stoe of snow doth rakeken the fields, and preserve cozne.

The diseases of this quarter bee Pustles in the face, Leprosie, Tooth-ach, red spots, Feners, the scab, fluxes of blood by the inferiour parts, payne of the eyes, Palsies, Gouts, and such like.

## Of the Spring.

**T**he Spring is the most comfortable quarter in all the yeare, and is of nature warme and moyst, for then the Sunne draweth neere to the Zenith, coming toward the Starres of a warme nature, and then the East Winds blow dispersing the superfluous humors, making the Earth apt to bring forth all things, for the good and comfort of man. This quarter beginneth the 11 of March, when the Sunne entreth into Aries, at what time the dayes and nights be equall, and continueth vntill the 12 of Iune, at which time the Sunne hath runne through Aries, Taurus and Gemini: If the Spring be much moyst, the fruite will be rotten and scarce, but sweats will abound: if hot, the trees soone bring forth leaues: the fruits of that quarter, as Cherries, &c. will soone be ripe, which being not gathered before their full maturity, will be subiect to wormes, especially in warme regions, but it is seldome with vs, though frequent in Italy. Roses will be frome, but not so sweete, and all such things shall better please the sight then the sent or tast: if it be cold and dry, there will hoare frosts fall in the end of the quarter, according to the full Moone, the wine and fruits will be scarce: being dry and not hot, fruit will be scarce, but good with want of graine, if it be cold, the fruits will be late riping, if it be wet with much Southwind, and the former Winter dry with Northwindes, the next Summer will happen Agues, and blaerenesse, dropping of the eyes, and payne in the bowels. A dry Spring, with much Southerne windes, & a wet winter full of Southerne windes going before, causeth Women with childe to be deliuered before their time, or to bring forth weake Childzen.

## A Prognostication.

### Children.

So that if the quarter vary from his proper nature: the commodities of the Earth be made worse & scarce. The ordinarie diseases of this quarter be Leprosie, red spots, tooth-ache, fevers of blood, pushes or wheales in the face, small poxe, running wormes, falling sicknesse, paine in the throte & necke, the Kings enill, wenches, griefes in the shoulders and armes, caused by blood.

### Of Summer.

Summer is of nature hot and dry like the fiery triplicite, or like the cholerick: it beginneth the 1. of June, when the Sunne entreteth into Cancer, continuing untill he haue accomplished the last degree of Virgo, and in this rage and choler most abounding being the hottest tyme in the yeare: but in the beginning there riseth certaine starres in Cancer, whose vertue is to moisten, especially Aselli, so that the Sunne comming to them, some raine falleth to fructifie the earth: but comming to Leo, being nere Syrius and Procyon, starres of a warme nature, the heate groweth most vehement, to temperate which, the Etesian windes blow. Lastly, comming to Virgo, which is a barren signe, the constellation of Arcturus rising, a mitigation of heate is produced with some raine.

If Summer be overwet, the Summer fruits shall putrefie, and there will be small store of graine, there will be many sicknesses: If it be onely dry, there will happen want of graine; and Summer fruit will be whollsome: The fishes shall die in waters, and great sicknesses will happen. If it excede in heate, many sicknesses also will happen with great store of Summer

mer fruits. If (to conclude) it be cold, the peare will be wholesome, but the fruits rotten.

This quarter as it is hot and dry in nature, so both it accordingly after the humours in Mans body, bringing all fruits to their ripenesse, Cattell to their fatnesse, and men to their Wealth. The Sickneses agreeing to the nature thereof, bee Griefes, Torments about the Breast, Ribs, and Spleene: Pustles, Leprosie, and diseases of the face, as in the Spring: Bleared and soze Eyes, with other Impediments therein, the Plurisie, Cough, heart and stomack-aking, Sorrow, Urinations, fevers of Blood, Apostumes, Pestilence, fevers, the Jaundise, paines in the Belly, and secret pangs, with other Infirmitie proceeding of Melancholy.

### Of Autumne.

Autumne is the Fourth and last Quarter Astronomically, but the Third according to our English account, by nature it is cold and dry, Melancholy, like old age, resembling the Element of the Earth, beginning at the Sunnes first ingresse into Libra, which is the fourteenth day of September, producing thereby a Second Equinotiall, equalling the dayes with the nights, which may also be called our Second Spring, making an apt time to take Physicke, Bleede, &c. But in that Libra is a signe of the Apyre triplicity, there is produced heate, with temperate moisture, but coming to Scorpio, the Apyre is made more cold and moist: For Scorpio is of the Watry triplicity: But coming to Sagittarius, a signe of the Fiery triplicity, accompanied

## A Prognostication.

With certaine Starres a warme nature, there is made a restraint of the extremity of wet and cold, for the good of such as sow and plow.

If Autumne bee most moyst, grapes will be putrified, and Wine bad, if the end be wet, there will be want of fruit in the ensuing yeare: If the beginning be dry, there will be Penuria Milij: if hot, many sicknesses and evils: if cold, there is losse of Harvest fruits in quantitie, Iuyce, and Beauty.

The diseases of this Quarter properly bee paynes in the backe, darkenesse of sight, retention of Urine, Fluxes of blood, Paynes in the backe, and Prime parts, with infirmities in the face, as in the Spring, also the Canker, Fistuloes, Emerods, the Stone and grauell, Feuers of blood, and impediments in the Eyes. And here note, that Winter, in Latine Hyems is so called, ab *hmo*, which is dimidium, for the vulgar people doe diuide the yeare into Two parts, Summer and Winter, Winter being the greater. Ver the Spring, is so called à Vireo, vires, because then omnia virent, all things flourish. *Aestas* Summer, is so called ab *estu*, which is a seruoze, by reason of heate. Lastly Autummus, Autumne, or Harvest, is so called à bonorum anni augmentatione: or it taketh name with Hipocrates, ob ortu arcturi, during till the Vespertine setting of the Pleiades, or of Autummus, which is morbidum or tempestuosum: And these foure times to bee resembled to the foure Regions of the World, to the foure Cardinall Winds, to the foure Elements, to the foure Quarters, to the foure Humors, and to the foure Ages, as in the ensuing Table,

Honiwax. 1630.

Eclipses of this yeare. 1630.

**T**here will be Foure Eclipses obserued this yeare in the Two lights of Heauen, in the Terrestriall Globe: Two of the Moone, and two of the Sunne, One of the Sun, and those of the Moone will be apparant within our Horizon, and the other of the Sun be without.

The first Eclipse will be of the Moone the Fiftenth day of May, according to the Julian account, but the Twenty five day of the same Moneth, according to the Lillian account in France, Ireland, and throughout America.

The Second Eclipse will be of the Sunne, the Thirty one day of May according to the old account, but the Tenth day of June according

### A Prognostication.

according to the reformed account, which fearefull Eclipse (if the day be cleare) will be seene with vs in England at Sixe a clocke at night: the middle or true coniunction of the Two lightes, will be at Sixe a clocke and Fifty Five minutes. The end of this Eclipse will be at Seauen a clocke and and Thirty Thre minuts. The digits eclipsed will be 9. 4.

The Third Eclipse will be of the Moon, the Fifth day of November according to the Julian account, but the Pintēnth day of the same Month according to the forraigne or reformed account which will be visible to vs at Eight a clocke and Thirty Eight minuts, the middle or true opposition at Ten a clocke and Twenty minuts, the end of the trouble at Twelue a clocke and Nine minuts. The digits Eclipsed will be 9. 27.

The Fourth Eclipse will be of the Sunne, the Twenty thre day of November, according to the Julian account, but the 3 day of December according to the Lillian account towards the Sunne rising and meridian in Magellanica, vnder the Peridian of new Guinea, but not visible to vs in England.

*Signes to Prognosticate what weather is toward.*

**T**o begin with the Sonne, the best prognosticator of all other, if he rise cleare not fiery red, if he chase the clouds before him into the West: if at Sun rising there be a circle about the Sun, and it van: sh equally away, if he be red at his setting: all these argue faire weather to ensue. But if he be fiery red at his rising, if he shew pale and wan, if at rising he seeme hollow, if red and blacke clouds be about him at his rising, or if his rayes be read both at rising and setting, if his beames at a morning or evening be contracted or short, if it raine at Sun setting, or his rayes looke darke or blew, or gather: if at his rising his beames seeme not bright and cleare: if before his rising the clouds gather like Globes moving not into the West, if a circle of cloudes appeare incompassing the Sun, leaving not all his light, if his circle about the Sun be broke: if at his rising he cast his beames a farre off amongst the clouds if he spread his beames before he be up, if at his setting he be overcast with a thicke mist: all these signifie wet, and often, tempestuous

## A Prognostication.

pestuous Weather. Also looke if the circle called Halo, be blacke, for it signifies raine, and if it breake, windes, from that part as the fraction in the circle respecteth.

## Presages by the Moone.

**A**ccording to the Egyptian, if on the Prime day the Moone be faire and bright, it will bee faire, if red, windes, if dimme and blackish, foule weather according to the verse.

*Pallida luna pluit, rubicunda flat, alba serenat.*

Marke the typos of her hornes when shee is five dayes old, with Pl. But best when shee is primed, if they bee blunt, raine: if pricking vpwards, and sharpe poynted, winds. Pliny sayth, these things fall true vpon the fourth day. If her vpper horne, which bends Northwards, be onely sharpe and pricked, winds from that coast: but if the nether horne bee so, winds from the South: if the fourth day after her change shee haue a red circle or Halo about her, winds and raine. Varro saith, when the Moone is foure dayes old, if shee put her hornes direct and straight forth, it is tempest at Sea, vnlesse there bee a cleare circle about her. If the one halfe of the full Moone seeme pure, faire weather: if red, winds: if blackish raine, mists and clouds about the Moone haue like effect, as Halo, the more, the worse: Whilst the new Moone is Croissant, and rising with the vpper tip of hir horne blackish,

## Honiwax. 1630.

blackish, telleth of wet after the full: but the nether tip being so, raine before the full: and if (as Varro saith) this blackishnesse appeare in the middest of the Moone, raine at the full: a circle about the full Moone, declareth winds from that part that the circle is most splendant: if her hornes at her rising shew more grosse and thicke then ordinary, looke for raine plenteously, and that before long: if shee appeare not before the Prime, the West wind blowing withall, cold winterly weather all that Moone. Lastly, with Pliny, there be eight poynts in euery Moone, and so many dayes (according as shee falleth vpon the angles of the Sunne) which onely obserue, and take their presages of future weather by, to witt 3. 7. 11. 15. 19. 21. 27. and the very day of coniunction.

### *Presages by the Starres.*

**N**Ext vnto the Moone wee may place the Starres, if the Starres seeme to shoote, winds from that quarter the Starres came from: the wetter the Spring and Summer, the dryer the Autumne: Autumne faire and dry, bringeth a windy winter: a circle about any of the other Planets, great showers: if the cloud in Cancer called Psepe, or the manger, standing betwixt Aselli or the little Asses appeare not, though otherwise the ayre be cleare, foule winterly weather: if the Northerne of these Starres be hid, great winds from the South, but the other being hid, North-east windes.

Of

## A Prognostication;

### *Of the Rainebow.*

**I**F Two Rainebowes appeare, looke for raine: A raine-bow presently after raine, sheweth faire weather;

### *Prefages from Thunder and Lightning.*

**I**F in Summer there be Thunder then Lightning, winds from from the coast where it Thundred: but if the Lightning exceed, Raine followeth: Lightning without Thunder, betokeneth Raine and Thunder: It it Lighten onely from the Northwest, Raine the insuing day. If from the North, windes thence: If from the South, Northwest, or full West it Lighten, especially in night, Wind and Raine from those Coasts: Morning Thunder, Windes: but mid-day Thunder, Raine:

### *Prefages by the Cloudes:*

**I**F the Raine ride apace in the Ayre, windes from the Coast they come, the worse if it come from the North or South: If at the Sunne set the Racke ride on both sides from towards him, Tempest: Blacke cloues flying out of the East, raine at night: but from the West Raine the next day: If the cloudes be disparkled many together of the East, flying like fleeces of Wooll, Raine for Three dayes after: when cloues fly low, seeming to settle vpon the topps of Hills, cold weather insueth: But the mountaine

## Honiwax. 1630.

aine tops being faire and cleare, the weather will take vp :  
If the Clouds seeme full charged, and yet looke white  
withall, which constitution of the ayre is called by some  
Towers, by others white weather, haile is at hand.

If Mists come downe from the hill, or descend from  
the heauens, and settle in the vallies, it promiseth faire hot  
weather: Mists in the Euening shew a hot day on the  
morrow. The like when white mists rise from waters in  
the Euening.

### *Prognostications by Fyers.*

**F**ROM the Heauens wee will proceede to our  
common Fires.

The fire burning pale, or keeping a hazzing  
noyse, stormy weather: if the flame of Fire  
or candle mount, winding or wauing, as it  
were, Windes: the like if the Fire or candle  
goe out of it selfe, or kindle, and take fire with  
much a doe. Further, when you discerne many  
sparkles gather together, the coales hanging  
together to the bottome, or side of the Pot  
newly taken off the Fire, the Fire raked in the  
embers, keeping a spitting and sparkling from  
it, if the ashes vpon the harth grow together,  
or when the lyue coale shineth brighter, or  
burneth more then ordinarie, all these betoken  
of raine.

Prog.

## A Prognostication. 1

### *Prognostications by water.*

**I**F the Sea, within the Hauen, after the departing of the flood in a low ebbe water be calme and yet keepe a noyse and rumbling within, winde ; if it doe thus by fits , cold weather raine : if in a calme season the Sea strond, or waterbankes resound or make a noyse, great Tempest ; the like of the Sea it selfe : The puffings swimming about the water , tell of cold weather for many dayes : The Sea being calme, heauing and puffing vp, sheweth there is great store of winds within her, which will shortly breake out to a tempest.

A Table

# A Prognostication.

A Table to know the houre of the night by  
the Moone, her comming to the South, the  
quantity of her shining and full Sea  
through England.

The Day age for her shi- ning.		The Moones coming to South		The Moons Age		High water at			
						London Timmor hartlepo	Bristow	Graues end.	Bar- wick O stend.

15	15	12	0	15	30	3	0	6	45

Note that the houre of the Moones comming to  
the South is the time of full Sea at Southampton,  
Quinborow, and Portsmouth. A.H.

**A**gainst the age of the Moone in the Third Row,  
you haue the time of the Full Sea in any of the  
Hauens vpon the right hand : And if you desire to  
to know the high Water, or time of the Tyde in a  
ny other Haven in England, you must ad the hou-  
res and minuts placed by the name of each Haven vnto  
to the houre of the Moones comming to the South :  
as the Moone being Threē dayes old, commeth to  
the South at Two of the Clocke and 24. minuts :  
then if desire the High Water at Redban, you must  
ad 45. minuts more, so haue you Threē of the Clock  
and 9. minuts. For the High-water at Redban, or  
Aberden, ad 45. minuts : for Dundee, St. Andrewes,  
Silly, 2. houres, 15. minuts : for Frith, Leith, Dunbar, 4  
houres 30. minuts : For Flamot, 5. houres 15.  
minuts : For Foy, Lyn, Humber, VVaymouth,  
Dartmouth, Plimouth, 6. houres : For Milford, Bridge-  
water, 7. houres 30. minuts : For Portland, Peter  
Port, 8. houres 15. minuts : For Orkenpoole, Or-  
well, 9. houres. Deip, Lux, Lenoyes, 9. houres, 45.  
minuts : For Bolen, Douer, Harwich, Yarmouth,  
10. houres, 30. minuts : For Callice, Rye, & Win-  
chelly, 11. houres, 15. minuts.

To know at whattime the Moone  
will bee full South any  
day in the yeare.

Seke her Age in the Third Columnne, answering  
to which in the Second Columnne is the houre of her  
comming to the South, and note all the increase she  
commeth to the South afternoone, that is, vntill  
she bee fiftēne dayes old, and all the decrease she  
commeth to the South in the morning.

To

## A Prognostication.

To know what a clocke it is in the  
night by the Moone,

Looke vpon any Sun dyall and see what of  
clocke it is by the shadow of the Moone ( as you  
doe by the Sun ) noting how much it wants  
or is past 12 . of the clocke: for so much it wants  
or is past the houre of her comming to the south  
that day, which houre you be taught to finde  
in the last table before going.

### Example.

Vpon a certaine day I looked vpon a Sun-  
dyall, and found the shadow of the Moone to  
point at 10 of the Clocke, which wanted two  
houres of 12, the same day I found her age 9.  
dayes, and thereby her comming to the South  
was at 7 hou: and 12 min: therefore it wanted  
2 hou: of the same: so that it must be 5 of the  
clocke, & 12 minuts past, or if the same day the  
shadow had been at 2 afternoone, it had been 2.  
hou, past 7 and 12 min: to wit 9 a clocke & 12  
minutes: And so of the rest.

Astronomicall Elections for Physicke and  
Chyrurgerie, depending vpon the  
place, and course of the Moone.

If thy body be filled with naughty and super-  
fluous humors, then were it convenient for thee

to draw bloud, so the heauens consent thereto, and thy age agré therewith, which being not circumspectly weighed, it may be most dangerous to the patient (of which, no vnderstanding man is ignorant) but when necessity brygeth, as for the Pestilence, Plurisie, Phrenzie, &c. then though the heauens deny, yet a veine is speedily to be opened, ad agri salutem. This considered of medicines some purgative, some comfortative, and others in the meane betwixt both medicines purgative bee either Soluendo or Leniendo: In the first the moone must bee in Cancer, Scorpio or Pisces. For the other, the moon must be taken when she worketh more in moistnes then drynes, being in a  $\Delta$  or  $\ast$  with  $\gamma$  and you must take heed in the houre of giving the medicine, least the Moone haue any aspect with  $\zeta$ : for he congeales the humors, making the medicine work little, likewise let her be free from any aspect with  $\nu$ , for hee is the giner of life, the helper and comforter of the vertues, so that the medicine can but weakly expell the humors, making the body affected with an euill qualite. Furthermore, in all purgative medicines obserue the ensuing Rules.

The $\Delta$ in	$\left\{ \begin{array}{l} \text{Purge Choler} \\ \text{Purge Phlegme.} \\ \text{Purge the Melancholy.} \end{array} \right.$	$\left\{ \begin{array}{l} \text{not combust,} \\ \text{elean.} \\ \text{aries.} \end{array} \right.$
$\ast$ or		
$\Delta$ with

 with Δ ♀ ♀ Purge the Melancholy. } of medi-  
 cine.

But let not the ☽ one be in any of the signes  
 that chaſe the rod, as γ, δ, ♄, for then the me-  
 dicine will ſtay but a little with the Patient,  
 cauſing him to vomit, vnleſſe you intend to purg  
 by vomiting, Alſo in purging the Melancholie  
 let not ♄ haue dominion, nor ♄, in purging the  
 Sanguine, or the liuer; nor ♄ the cholericke,  
 bitter ſweats &c. nor Luna the head, nor ♄ in  
 purging the lungs.

How the vertues be Corroborated.

The vertues be either Vitall, Animall, or Pa-  
 turall, the vitall vertues remayne in the heart,  
 the Animall in the braine, & the Paturall in the  
 liuer. The Vitall vertues are governed of Sol  
 and ♄, the Animall of Luna ♀ & Venus, and the  
 Paturall of Ioue & Venus.

Other vertues be alſo governed of the Planets  
 as the vertue Attractive is governed of Sol the  
 Dis-

Disgestiue of Ioue, the Retentiue of ♄, and the  
Expulsiue Luna. Also the signes thus gonerne  
the vertues, ♀ and ♄ rule the Attractive, ♀ and  
the Disgestiue ♄ and ♀ the Retentiue, ♄ and ♀  
the Expulsiue.

Also the vertues be ruled by the Planets thus,  
Sol the wel-spring of the vertues Vitall, Luna  
of the vertues Animall, ♄ of the Recepriue, ♀  
of the Augmentatiue, ♄ of the Attractive, ♀  
of the Appetitiue, and ♄ of the Imaginative:  
Therefore when you would fortifie any of these  
vertues, fortifie the planet signifying the same  
and it is done.

### Rules for drawing of blood.

In letting of blood you must know what persons are  
fit to bleed, and what not, and if they be fit, how it is  
with the Patient inwardly, for his complexion and age  
& outwardly for the time of the yeare, time of the month  
day and dyet.

### For Completion.

For the Phlegmatick let the Moone be in ♀ or ♄  
when you draw blood. For the Melancholy in ♄ or ♄  
For the Cholericke in ♄ or ♄: and for the Sanguine  
in any of the aforesayd: Luna signum membrum domi-  
nans peragante.

### For age let blood.

In Month from the change to the First Quarter.

## A Prognostication.

In Middle age from the first Quarter to the full.  
In Elder age from the full to the last Quarter.  
In Old age from the last Quarter to the Change.

For the time of the yeare:

The Spring is best, Harvest indifferent, the rest  
of the yeare bad, and to be vsed but vpon necessity.

For the time of the Month:

Let not blood Threē dayes before & after the change  
the day before and after the ☿ of Luna and ♄, the like of  
the ☿ of Luna and ♄. Let not blood, Venus and Luna in  
☿, while Venus is combust.

The Moone in any aspect with ♀ or Venus, or in \*  
or ♄ with Sol or Mars, produce a fit time to let blood.

The time of the day.

In the Morning fasting is best, or in the Evening  
after perfect digestion, provided the ayre be temperate  
and the wind not South.

Such persons that be not fit to bleed, be they that be  
vnder 14. yeares, or more then 56. yeares old, or such  
as be exceeding fat, or very leane.

And after bleeding vse no violent exercise, no sleeping  
venery or gluttony.

---

God saue our King, and Queene defend,  
From all their foes, that ill intend.

---

**FINIS.**
